

Jokic MVP Case

Caleb Ramsey

April 11, 2026

Nikola Jokic

The Case

Nikola Jokic is putting together one of the strongest offensive MVP cases we have ever seen from a center, which honestly just feels normal for him now. This is another all-time great offensive season added to a résumé that is already historic. He is averaging 27.8 points, 12.9 rebounds, and 10.9 assists per game on 66.9 TS%. That makes this the sixth triple-double season in league history, and his second. At this point, he has made 20-10-10 feel almost routine, pairing elite efficiency with a level of playmaking no big has ever matched.

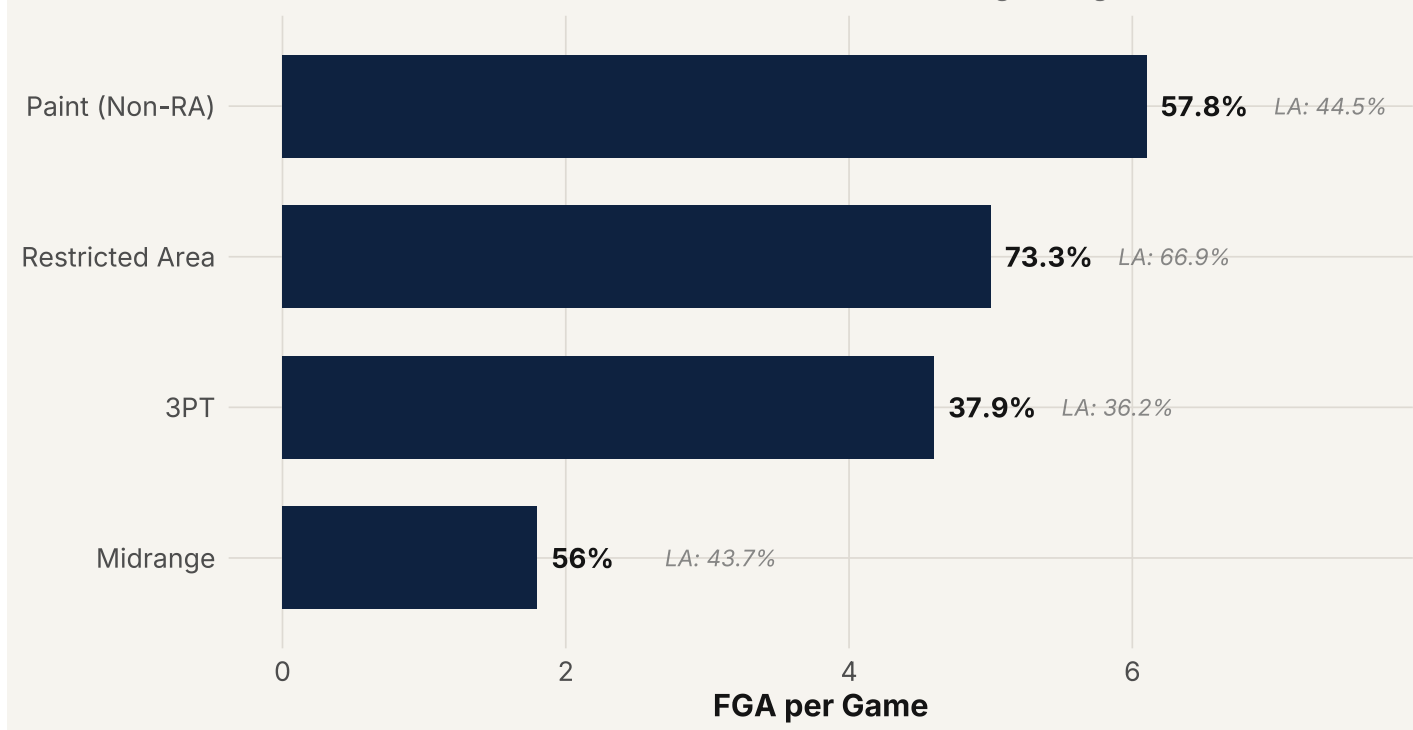

The scoring volume may be down a bit from some of his recent peaks, but within the context of Denver's roster, that trade-off makes sense. Even with that shift, he is still the engine behind everything they do. Jokic is the piece that organizes, elevates, and drives the entire offense, helping push it into a tier with some of the best units we have seen this century.

Scoring Profile

Zone	Pct	Volume	Context
Restricted Area	73.3%	5.0 att/G	+4.0 rFG%
Paint (Non-RA)	57.8%	6.1 att/G	+9.0 rFG%
Midrange	56.0%	1.8 att/G	+13.0 rFG%
3PT	37.9%	4.6 att/G	+2.0 rFG%
FT	82.8%	7.4 FTA/G	42.1% FTr

Efficient across the board, dominant inside

Labels show Jokic FG% and league avg

Jokic's scoring profile is built on all-time great touch. 11.1 of his 17.5 shot attempts per game come in the paint, where his strength, patience, and footwork let that touch completely take over. He gets to short push shots and finesse finishes at a rate no other star can really match. In the modern game, defenses are usually comfortable giving up those non-rim paint shots if it helps take away threes and protect the basket. Against most players, that works. Against Jokic, it does not. He turns those "acceptable" shots into elite offense, generating nearly 1.2 points per shot on more than six paint non-RA attempts per game.

And even when teams do crowd his space and try to push him away from those paint looks, it rarely fixes the problem. He is still absurdly efficient everywhere else, so taking one area away usually just means forcing him into another shot he also makes at a ridiculous rate. That is what makes him so difficult to contain. There is no clean answer for the scoring alone, and that is before you even get to the passing, where he can punish help with skip passes, hit cutters, and pick apart whatever coverage a defense tries to throw at him.

Playmaking / Offensive Burden

Season	Player	APG
2025-26	Nikola Jokic	10.9
2025-26	Cade Cunningham	9.8
2025-26	Luka Dončić	8.3
2025-26	James Harden	8.0
2025-26	Jalen Johnson	7.9

Jokic leads the NBA in assists per game by more than a full assist, which is absurd on its own before you even consider the position he plays. And the creation is not empty volume or force-feeds either. He ranks first in potential assists per 100 (24.0) and first in rim assists per 100 (6.8), which speaks to both how much he is creating and the quality of the looks he is generating.

Season	Player	APG
2025-26	Nikola Jokic	10.9
2024-25	Nikola Jokic	10.2
1967-68	Wilt Chamberlain	8.6
1966-67	Wilt Chamberlain	7.8
2023-24	Joel Embiid	5.6

He is not just having a great passing season for a center, he is continuing to rewrite what playmaking from the position can even look like. The gap between him and every historical comparison is enormous. The only remotely comparable name is Wilt, and even that came in a completely different context when he shifted into more of a passing hub. Jokic is doing true lead-guard creation from the five while still scoring with elite efficiency, which is why the offensive burden he carries is so hard to compare to anyone else.

Historic Offensive Context

Season	Player	Points	Rebounds	Assists	Games	TS%	rTS%
2025-26	Nikola Jokic	27.8	12.9	10.9	64	66.9%	+8.8
2024-25	Nikola Jokic	29.6	12.7	10.2	70	66.3%	+8.7
2020-21	Russell Westbrook	22.2	11.5	11.7	65	50.9%	-6.3
2018-19	Russell Westbrook	22.9	11.1	10.7	73	50.1%	-5.9
2017-18	Russell Westbrook	25.4	10.1	10.3	80	52.4%	-3.2
2016-17	Russell Westbrook	31.6	10.7	10.4	81	55.4%	+0.2
1961-62	Oscar Robertson	30.8	12.5	11.4	79	55.4%	+7.5

Jokic is the second player in NBA history to average a triple-double more than once, and he is doing it at the cleanest, most efficient level the league has ever seen. His 2025-26 season sits at the top of this table, with last year right behind it, which tells you how far he has stretched this kind of production. This is not Russ piling up volume as a one-man army or Oscar carrying everything through sheer usage. Jokic is pairing historic all-around numbers with elite scoring efficiency.

Team Offense / On-Off Impact

Team	Season	ORTG	rORTG
Dallas Mavericks	2003-04	112.1	+9.2
Phoenix Suns	2004-05	114.5	+8.4
Golden State Warriors	2015-16	114.5	+8.1
Boston Celtics	2023-24	123.2	+7.9
Phoenix Suns	2009-10	115.3	+7.7
Dallas Mavericks	2001-02	112.2	+7.7
Phoenix Suns	2006-07	113.9	+7.4
Cleveland Cavaliers	2024-25	121.7	+7.2
Dallas Mavericks	2002-03	110.7	+7.1
Golden State Warriors	2016-17	115.6	+6.8
Los Angeles Clippers	2014-15	112.4	+6.8
Denver Nuggets	2025-26	122.4	+6.7

The individual numbers are absurd, but the team offense is what really drives the case. Denver posted a 122.4 offensive rating this season, the second-highest mark ever, and finished 1.7 points ahead of the next-best offense in the league. Even after adjusting for era, their +6.7 relative offensive rating still ranks 12th since 2000, putting them firmly among the best offenses of the century. Jokic is the engine behind all of it, driving one of the best offenses we have seen in years.

Supporting Context / Injuries

Player	Games_Missed
Nikola Jokic	16
Christian Braun	36
Peyton Watson	26
Cam Johnson	26
Aaron Gordon	44

Jokic missed 16 games this season and the Nuggets still went 10-6 without him, but the broader context around him was far from stable. Several key rotation players also missed significant time, including Braun, Watson, Cam Johnson, and Aaron Gordon. Even with that inconsistency, Denver still built one of the league's best offensive environments around Jokic's creation.

That reliance shows up clearly in the impact numbers. Jokic's +13.4 net on-off ranks third among qualified players this season, reinforcing how much of Denver's success is driven directly by whether or not he's on the floor.

Advanced Stats

Metric	Rank	Value
DPM	1	7.5
3Y RAPM	1	8.9
O-EPM	1	6.6

Of course, Jokic remains an advanced analytics darling. Every serious impact model lands in basically the same place. He ranks first in offensive EPM (offensive impact), first in DPM (overall impact), and first in 3-year RAPM (long-term, variance-adjusted impact). However you want to look at it, the models land in a similar place.

Defense

Jokic's defense is probably the biggest weakness in his case, and that part is fair. He is not a high-level rim protector, and the numbers reflect that. His rim deterrence and finishing contests at the basket are clear limitations, which is a big part of why Denver's defense can look vulnerable from game to game.

But the full picture is more nuanced than just calling him a bad defender and moving on. Jokic still has a +2.1 D-DPM, an all-in-one metric meant to estimate defensive impact, which puts him in the 98th percentile. A lot of that value comes from the areas where he really does help. He avoids fouls at an elite level, ranking in the 97th percentile in foul rate, he is disruptive in passing lanes with 3.7 deflections per 100 and 1.9 steals per 100, and he closes possessions as well as almost anyone in the league. His defensive rebounding is probably his biggest strength on that end, and that matters. Ending a possession is still defense. He is not erasing mistakes at the rim, but he is active, smart, and valuable in ways that still show up over the course of a game.

Closing

Jokic is one of the greatest offensive players ever, and he has added another historic season to a résumé that hardly needed it. He continues to do things that do not really have a clean historical comparison. The scoring is elite, the playmaking is unmatched for his position, and the control he has over an offense is something only a handful of players ever reach. None of this is especially new for him, which almost makes it more absurd. This is another MVP-level season from a player whose offensive résumé is already deep in all-time territory.
