

March Momentum (Mickey Mouse March) – Last 5 Seasons

Caleb Ramsey

March 05, 2026

Executive Summary

“Mickey Mouse March” has become a pretty common phenomenon in the NBA. Every year, some players start performing well above their usual level once the season moves past the All-Star break and into March. Sometimes it’s driven by teams tanking and opening up minutes, softer late-season schedules, injuries creating opportunity, or simply a player getting hot at the right time.

Because of that context, these runs are often dismissed as “not real,” with the expectation that the numbers will come back down soon after. But how true is that idea? Are most March breakouts actually empty late-season variance, or are there signs that a hot stretch might represent something more sustainable?

Data & Definitions

Data source

Player game logs were pulled from NBA.com via the hoopR package, covering the 2020–21 through 2025–26 seasons. All statistics come from regular season games only.

Game-level data are aggregated to create two time splits within each season:

- Pre-March: All games played before March
- March: Games played during March

The goal is to identify players whose production jumped once the calendar turned to March.

What counts as a “March momentum” candidate?

To avoid small-sample issues, players must meet minimum playing-time thresholds in both periods:

- Minimum 15 games pre-March
- Minimum 10 games in March
- Minimum 20 MPG pre-March
- Minimum 24 MPG in March

Players are then flagged as candidates if they show:

- 3 point increase in scoring (PPG)
- No major efficiency drop (TS% change $\geq -2\%$)

Leap type classification

Each scoring jump is categorized based on what changed during March.

Leap Type Description

- Role expansion: Large increases in minutes and shot volume
- Shooting spike: Big efficiency increase without much extra volume
- Shot diet shift (3s): Much higher share of three-point attempts
- Shot diet shift (FTs): Large increase in free throw rate
- Combo/growth: A mix of smaller improvements across several areas

Measuring carryover

To evaluate whether March performance was “real,” each player’s scoring the following season is compared to their pre-March baseline.

Carryover outcomes are labeled as:

- Held peak: next season scoring stays near March levels
- New baseline: scoring improves clearly above the pre-March level
- Minor bump: small improvement but not sustained
- No carry: production returns to pre-March levels

Findings

1) March scoring jump vs efficiency change

How to read:

- Right = bigger March scoring jump.
- Up = more efficient March scoring (TS%).

Overall, the chart shows that most March scoring jumps aren't driven by massive efficiency gains. While some players do see real efficiency bumps, large spikes are relatively rare, suggesting many of these scoring increases come from more minutes, more shots, or a larger role rather than a leap in shot-making.

2) Top candidates

Table 1: Top 10 March scorers (PPG in March) – last 5 seasons

Season	Player	Team (Mar)	GP (Mar)	MPG (Mar)	PPG (Mar)	TS% (Mar)
2024-25	Shai Gilgeous-Alexander	OKC	14	34.1	34.7	+65.5%
2021-22	LeBron James	LAL	12	38.8	34.3	+62.9%
2022-23	Shai Gilgeous-Alexander	OKC	11	35.3	33.5	+64.4%
2021-22	Giannis Antetokounmpo	MIL	12	33.9	33.2	+65.6%
2022-23	Joel Embiid	PHI	15	33.4	33.2	+69.6%
2021-22	Jayson Tatum	BOS	13	37.1	32.8	+69.8%
2022-23	Damian Lillard	POR	10	36.9	32.5	+61.2%
2023-24	Luka Dončić	DAL	14	37.5	32.5	+59.9%
2022-23	Devin Booker	PHX	15	35.8	32.1	+65.3%
2023-24	Giannis Antetokounmpo	MIL	11	37.3	31.8	+64.4%

The biggest March scoring totals usually come from established superstars, not surprise breakouts. While these months can sometimes reflect sloppy or unusual late-season basketball, they also often show elite players ramping up usage and form as teams push toward the playoffs.

Table 2: Top 10: Biggest March scoring jumps (PPG Δ)

Season	Player	Team (Mar)	PPG (Pre->Mar)	PPG Δ	TS% Δ	Type
2024-25	Quentin Grimes	PHI	11.8 -> 26.6	+14.9	+5.3%	Role expansion
2022-23	Mikal Bridges	BKN	18.1 -> 28.8	+10.8	+5.6%	Shot diet shift (FTs)
2023-24	Jalen Green	HOU	17.8 -> 27.7	+9.9	+10.0%	Role expansion
2024-25	Coby White	CHI	18.5 -> 27.7	+9.1	+5.0%	Shot diet shift (FTs)
2021-22	Jordan Poole	GSW	16.6 -> 25.4	+8.8	+9.7%	Role expansion
2024-25	Naji Marshall	DAL	11.3 -> 19.8	+8.5	+2.8%	Role expansion
2023-24	Gary Trent Jr.	TOR	12.3 -> 20.8	+8.5	+4.9%	Role expansion
2024-25	Deni Avdija	POR	15.5 -> 23.4	+7.9	+8.6%	Role expansion
2022-23	Zach Collins	SAS	10.4 -> 17.8	+7.4	+0.2%	Role expansion
2020-21	Montrezl Harrell	LAL	12.1 -> 19.5	+7.4	+1.9%	Role expansion

Table 3: Top 10: Biggest March efficiency jumps (TS% Δ)

Season	Player	Team (Mar)	PPG (Pre->Mar)	TS% (Pre->Mar)	TS% Δ	PPG Δ	Type
2020-21	Robert Covington	POR	7.4 -> 12.5	+51.1% -> +73.0%	+21.9%	+5.1	Shot diet shift (3s)
2024-25	Cason Wallace	OKC	7.6 -> 11.5	+52.4% -> +67.4%	+15.0%	+3.9	Shot diet shift (FTs)
2024-25	Gabe Vincent	LAL	5.4 -> 9.7	+48.6% -> +63.2%	+14.6%	+4.2	Role expansion
2021-22	Immanuel Quickley	NYK	10.4 -> 14.9	+49.2% -> +63.7%	+14.5%	+4.6	Shooting spike
2021-22	Jayson Tatum	BOS	25.7 -> 32.8	+55.6% -> +69.8%	+14.2%	+7.1	Shooting spike
2022-23	Tyrese Maxey	PHI	19.3 -> 22.7	+56.0% -> +70.1%	+14.1%	+3.4	Shooting spike
2023-24	Josh Giddey	OKC	11.4 -> 16.3	+52.1% -> +64.8%	+12.6%	+4.9	Shot diet shift (3s)
2020-21	Jaden McDaniels	MIN	6.1 -> 9.6	+53.7% -> +66.1%	+12.4%	+3.5	Combo / growth
2022-23	Corey Kispert	WAS	10.1 -> 14.8	+65.2% -> +77.1%	+11.8%	+4.8	Role expansion
2024-25	Paolo Banchero	ORL	24 -> 29.8	+51.2% -> +61.6%	+10.4%	+5.8	Shooting spike

Some March heaters come from players suddenly shooting much more efficiently. Players like Robert Covington, Immanuel Quickley, Tyrese Maxey, and Jayson Tatum saw major efficiency spikes during the month while their scoring climbed as well. These stretches are often driven by hot shooting or a run of high-quality looks, which can produce big numbers for a few weeks but are difficult to sustain over longer periods.

Other March surges are more about opportunity than shooting. Players such as Quentin Grimes, Jalen Green, Jordan Poole, and Deni Avdija saw their roles expand late in the season, leading to more minutes and shot attempts. In those cases, the scoring jump reflects a larger workload rather than a sudden leap in ability, which helps explain why some of these runs fade once roles and rotations normalize the following season.

Carryover

4) Does it carry?

The outcomes reinforce the “Mickey Mouse March” pattern many fans are familiar with. Most late-season scoring surges fade once the next season begins, with only a smaller group maintaining that level or turning it into a new baseline. In other words, while March runs can highlight opportunity or momentum, they rarely translate directly into sustained production the following year.

5) March jump vs next-season baseline carry

Bigger March scoring jumps don't necessarily lead to bigger improvements the following season. While a few late-season surges do carry forward, many players return closer to their prior level once the new year begins. The overall trend suggests that a hot March alone isn't a reliable indicator of future scoring growth and often reflects temporary circumstances.

What predicts carryover?

A big March doesn't automatically signal a breakout.

The jump can still be useful, but mostly as a reason to look deeper. Changes in role, minutes, or shot profile often matter more than the scoring spike itself. In other words, the March numbers are better treated as a starting point for context, not a prediction on their own.

2025–26 snapshot (season-to-date)

As of 2026-03-04. Filters: GP 8, MPG 18. Last N = 10.

Table 4: 2025–26: biggest recent scoring swings (last 10 vs season baseline)

Player	Team	GP	MPG	PPG (season)	PPG (last N)	PPG swing	TS% (season)	TS% (last N)	TS% swing
GG Jackson	MEM	41	20.1	10.7	17.0	+6.3	59.1%	66.2%	+7.2%
Nique Clifford	SAC	59	22.8	7.3	13.5	+6.2	44.5%	48.7%	+4.2%
Desmond Bane	ORL	60	34.2	20.4	25.9	+5.5	59.6%	75.7%	+16.2%
Joel Embiid	PHI	33	31.1	26.6	32.1	+5.5	60.3%	64.6%	+4.2%
Jamir Watkins	WAS	32	18.6	5.9	11.0	+5.1	55.9%	62.9%	+7.0%
Jarace Walker	IND	61	24.8	11.1	16.2	+5.1	54.2%	55.7%	+1.5%
Isaiah Collier	UTA	54	25.7	11.1	16.1	+5	57.0%	59.7%	+2.7%
Maxime Raynaud	SAC	55	24.6	10.7	15.6	+4.9	56.5%	64.0%	+7.5%
Cooper Flagg	DAL	49	34.1	20.4	25.3	+4.9	54.6%	53.7%	-1.0%
Micah Potter	IND	29	20.0	9.3	14.1	+4.8	63.8%	69.8%	+6.0%
Nolan Traore	BKN	39	22.6	8.4	12.9	+4.5	45.8%	48.2%	+2.4%
Peyton Watson	DEN	49	30.6	14.9	19.4	+4.5	59.8%	55.1%	-4.7%
Precious Achiuwa	SAC	55	21.7	8.3	12.7	+4.4	52.9%	53.6%	+0.7%
Justin Champagnie	WAS	56	19.3	8.1	12.5	+4.4	53.4%	61.7%	+8.3%
Jarrett Allen	CLE	51	27.6	15.3	19.4	+4.1	67.0%	71.5%	+4.5%

So who might have their own March heaters this year? A few players have already been on strong scoring runs heading into the month and are worth keeping an eye on if the trend continues. Young players like Nique Clifford, Jarace Walker, Isaiah Collier, and GG Jackson have seen some of the biggest recent jumps, suggesting growing roles and confidence offensively. Meanwhile, established scorers such as Desmond Bane and Joel Embiid also appear to be finding another late-season groove.

Final Takeaways

- Most March heaters aren't real. Late-season scoring spikes happen every year, but most players end up back near their previous level the next season.
- The context behind the jump matters. Runs tied to more minutes, a bigger role, or a different shot profile are more believable than a player just getting hot.
- Use March runs as an indicator, not a prediction. They're usually more about short-term opportunity than a true breakout.
